Times Square Track Current Limiters are designed to provide an answer to energy limitations on wattage-per-foot requirements for lighting track installations. Some newer energy codes set a rating of 30 to 70 watts per linear foot of track irrespective of the actual wattage that is meant to be used on the track, unless a current limiting device is permanently installed between the track and the line feeding it. Times Square current limiters are available in over 12 different current ratings.

Available in black, white and silver finishes. Custom colors are available by request and at an additional charge.

## Features

- Available with ratings from 1-10, 12 and 15 Amps (others available as special order), 120 & 277 Volts
- Feed only or feed through design (surface mount only)
- Available for use with commercial or specification grade track
- Linear G Series specification grade limiters will fit into recessed track sleeves
